ESET Full Disk Encryption version 2.0.18.0 has been released

2024-10-09 - Steef | ESET Nederland - Comments (2) - Feature release

ESET Full Disk Encryption version 2.0.18.0 has been released.

Changelog

- Added: Single sign-on for Windows profiles using the Windows password
- Added: Disabling or pausing pre-boot authentication now leverages the Trusted Platform Module (TPM) (Systems that were encrypted using the TPM and have authentication paused or disabled will be upgraded automatically)
- Added: Turkish Q & F keyboard layouts to the pre-boot environment
- Improved: User interface now has rounded corners in Windows 11
- Improved: Pop-up dialogs have been improved
- Fixed: When attempting to encrypt using OPAL and TPM, if the OPAL check fails the system will default to not using OPAL or TPM in the encryption process
- Fixed: Microsoft Surface devices where the system would not boot after turning on Secured Core
- Fixed: System information becomes malformed which prevented the AIS service from starting
- Fixed: Modules would not be updated by the EFDE installer
- Fixed: Offline licenses would become deactivated after successful initial activation
- Removed: 32-bit operating systems are no longer supported
