Release announcement: ESET Endpoint Antivirus/Security 7.2.2072 (Hotfix)

2020-06-12 - Steef | ESET Nederland - Comments (0) - Servicing release

Dear all,

This is to inform you that we have successfully published the **hotfix release** of both **ESET Endpoint Antivirus** and **ESET Endpoint Security 7.2** and the installation binaries are henceforth available in the software repository of ESET Security Management Center (ESMC).

Change-log:

- Fixed: Windows 10, version 2004 blue screen errors (BSOD) on machines with certain third-party drivers.
- Fixed: Sensitivity levels of detection mechanism would block files even if configured to report only.
- Fixed: System shutdown after a scheduled on-demand scan if no action was selected.
- Fixed: A finished on-demand scan initiated from central management console can result in shutting down the scanned computer even without activated shutdown option.

Known issues:

- HIPS component is reporting wrong status after enabling before restart.
- Policies with thousands of entries in certain configuration lists take very long or fail to synchronize with central management console.
- On Windows 10, build version 1903 and 1909, the integration with AMSI can stop working and PowerShell scripts execution cannot be monitored on-the-fly.
- ZIP-archives with many infected objects will not be logged correctly if native Windows unpacker is used for decompression.

Build version: **7.2.2072.0**
