ESET Server Security for Microsoft Windows Server version 11.1.12005.2 has been released

2024-10-30 - Steef | ESET Nederland - Reacties (0) - Hotfix

ESET Server Security for Microsoft Windows Server version 11.1.12005.2 has been released and is available for download from the ESET website or upgrade from ESET PROTECT repositories.

This release does not impact the changelog of the previously released build 11.1.12005.0.

- The reason for this repacked build release is to resolve an issue with a default setting in the new RDP Access restriction feature, which is available only for environments without a firewall component.
- Note that this issue could only happen in instances without the firewall component and only when applying the product update in the form of .msi installation of build v11.1.12005.0. If the product update was performed through automatic updates, this issue would not occur.
