Release Announcement: ESET Full Disk Encrpytion 1.3.3.35 (Hotfix)

2022-08-17 - Mitchell | ESET Nederland - Reacties (0) - Hotfix

Changelog version 1.3.3.35

- Fixed: Temporarily disabling FDE authentication now automatically changes the GUI after the set period of time
- Fixed: Service no longer crashes when MS Storage Spaces are being used on the system
- Fixed: A problem if an OPAL encrypted system crashes for any reason, the software would report it is no longer encrypted on next reboot
- Fixed: A problem where the pre-boot authentication screen would freeze when a 2nd monitor is connected or disconnected
- Fixed: Security vulnerability CVE-2022-2402 [CVSS 6.5] - reported externally
- Fixed: A problem were the pre-boot loader would not be updated during an upgrade
- Fixed: A problem with HP Elitebook failing to boot with "Unable to locate operating system boot file" error
- Fixed: MSP licenses now show no expiration in the ESET Protect console
- Fixed: Workaround for a bug in some Lenovo UEFI implementations, that incorrectly report parameters of NVMe drives. This prevented affected systems from booting, when encrypted using TPM with NVMe drives.
