Add a trusted IP address to allow connection to a network device such as a computer or printer in ESET Security Management Center (7.x)

Anish | ESET Nederland - 2022-08-19 - Comments (0) - ESET Security Management Center

Issue

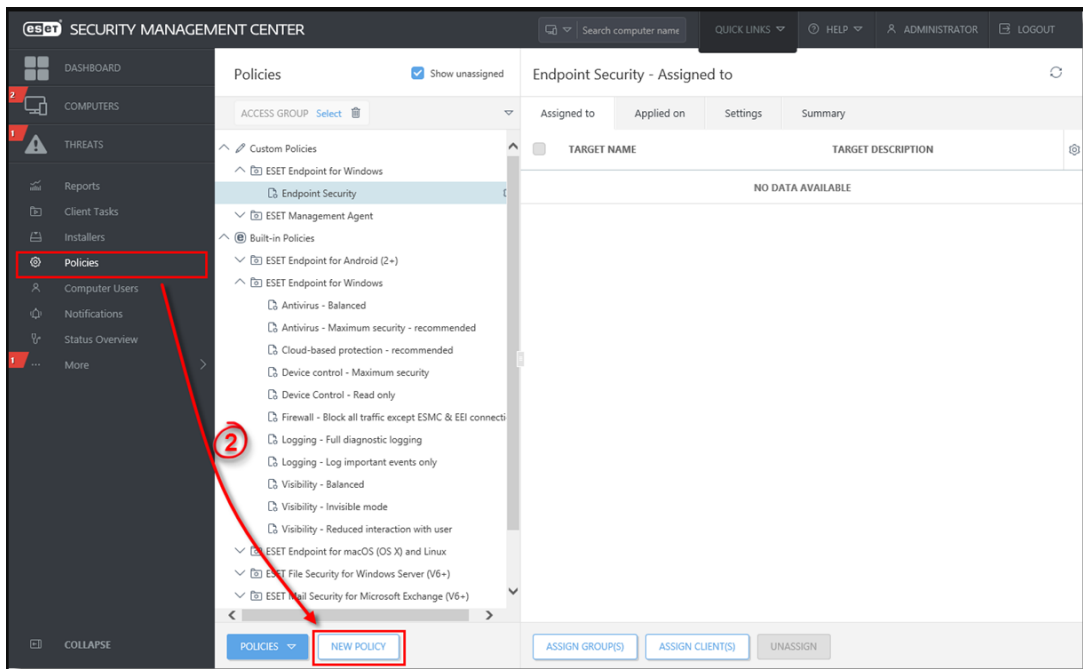

If you are unable to connect to another computer or device, such as a printer on your network, you can add these devices to the trusted range of IP addresses defined on the computer you are trying to connect from.

Solution

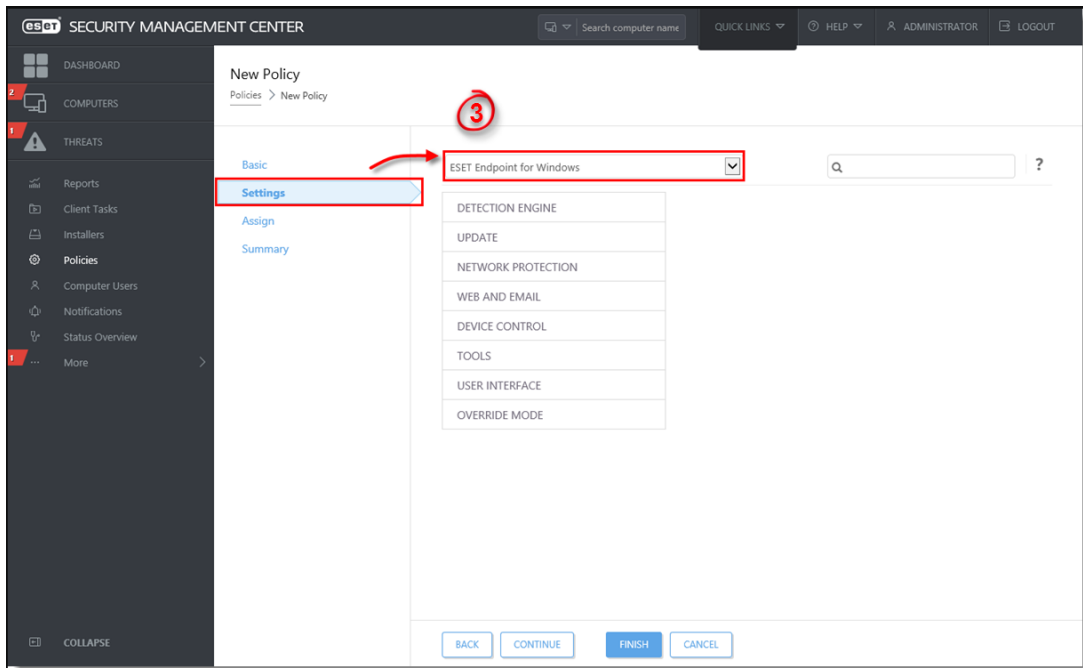

Endpoint users: [Perform these steps on individual client workstations](#)

Home users: [View instructions to resolve this issue in your ESET home product](#)

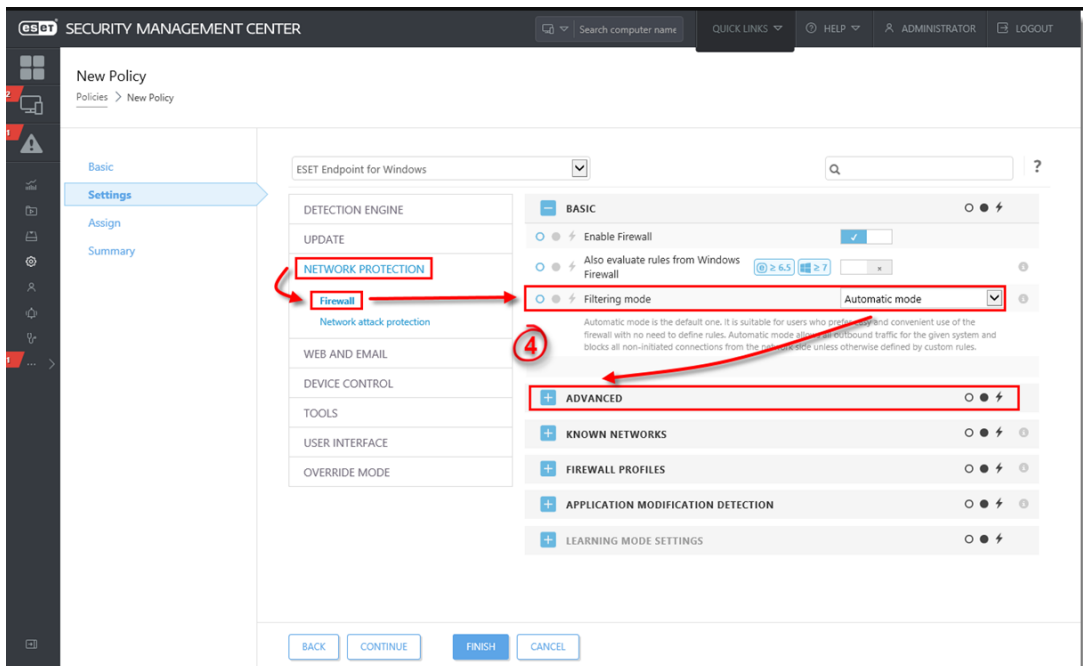

1. [Open ESET Security Management Web Console](#) (ESMC Web Console) in your web browser and log in.
2. Click **Policies** → **New Policy** (or **Policies** → **Edit** to edit an existing policy).

3. Click **Settings** and select **ESET Endpoint for Windows** from the product drop-down menu.

4. Click **Network Protection**, select **Firewall**, select **Automatic mode** from the **Filtering mode** drop-down menu and then click **Advanced** and click **Edit** next to **Zones**.

5. Select **Trusted zone** and click **Edit**.

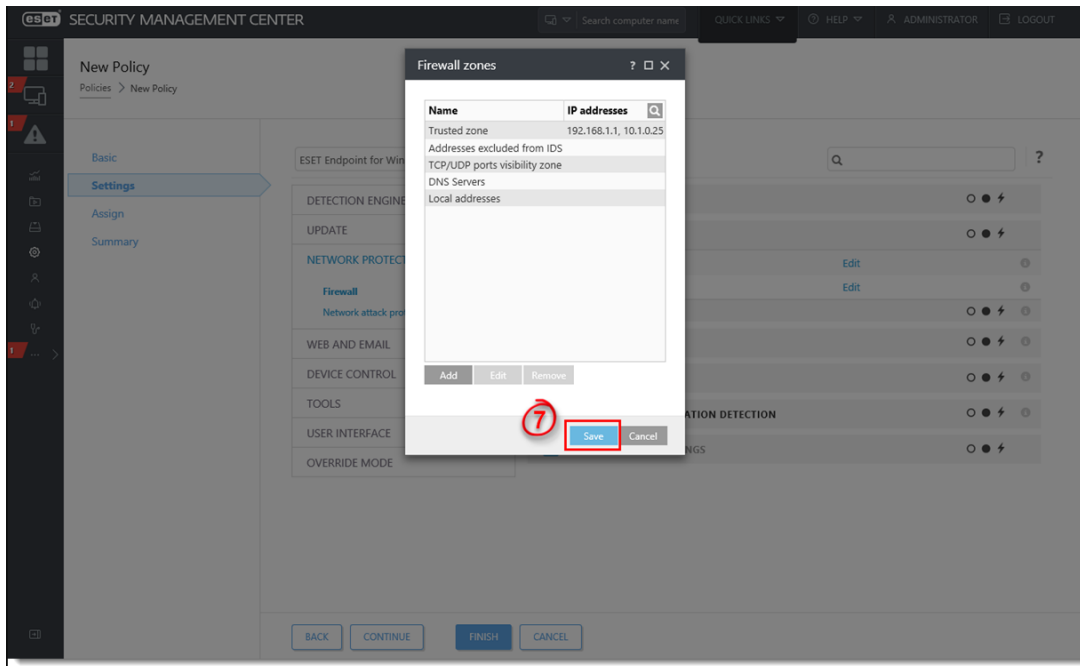

6. Type the trusted IP address(es) in the **Remote computer address** field and click **OK**.

 **Multiple IP addresses**
Use commas to separate multiple IP addresses, for example: 192.168.1.5, 10.1.0.99, 10.1.0.0/255.255.0.0

7. Click **Save** and assign the policy to the designated host or group. The IP addresses used below are examples; you must enter the actual IP address of the computer/device that you are connecting to.
