Add a trusted IP address to allow connection to a network device such as a computer or printer in ESET Security Management Center (7.x)

Anish | ESET Nederland - 2022-08-19 - Comments (0) - ESET Security Management Center

Issue

If you are unable to connect to another computer or device, such as a printer on your network, you can add these devices to the trusted range of IP addresses defined on the computer you are trying to connect from.

Solution

Endpoint users: Perform these steps on individual client workstations

Home users: View instructions to resolve this issue in your ESET home product

1. <u>Open ESET Security Management Web Console</u> (ESMC Web Console) in your web browser and log in.

4. Click **Network Protection**, select **Firewall**, select **Automatic mode** from the **Filtering mode** drop-down menu and then click **Advanced** and click **Edit** next to **Zones**.

6. Type the trusted IP adress(es) in the **Remote computer address** field and click **OK**.

7. Click **Save** and assign the policy to the designated host or group. The IP addresses used below are examples; you must enter the actual IP address of the computer/device that you are connecting to.
