Can I disable security and stability updates in ESET endpoint products? (8.x)

Steef | ESET Nederland - 2020-12-10 - Comments (0) - Endpoint Solutions

Issue

I want to disable security and stability updates in my ESET endpoint product

Details

Security and stability updates is an update channel for a critical hotfix. Hotfixes are distributed automatically to all supported versions. They undergo much more dynamic Quality Assurance processes and contain only essential modifications. Each security and stability update must guarantee that:

- It contains all bug fixes from previous security and stability updates for a given product version
- Product major and minor version is not changed
- The update is applied automatically without any user interaction
- End-user license agreement in the product is not changed
- No functionality is added, removed, or modified
- Product requirements for hardware and software are not changed

Solution

Security and stability updates are enabled for all ESET endpoint products by default, and it is not possible to disable them.
