

Command line options for ESET Remote Administrator push installation not working

Ondersteuning | ESET Nederland - 2025-03-07 - [Comments \(0\)](#) - [5.x](#)

<https://support.eset.com/kb2401>

Issue

Unable to execute a push installation from ESET Remote Administrator (ERA) using command line options

Solution

You might need to run the installation on the client workstation manually, using the following command line option:

```
location\installerfile.msi /qn
```

For example:

```
c:\nod32\eav_nt32_enu.msi /qn
```

If, after running this command, a pop-up notification appeared, download and install the latest Windows Installer Redistributable corresponding to the machine you are pushing the ESET product package to.

[Download Windows Installer Redistributable](#)

After installing WIR, restart the target client workstation and attempt the push installation again.
