Configure endpoints to use different update settings depending on the network they are connected to using ESET Security Management Center (7.x)

Anish | ESET Nederland - 2018-09-14 - Comments (0) - ESET Security Management Center

Issue

- Use dynamic groups automatically determine the update settings for client workstations depending on the network they are connected to

Solution

Endpoint users: [Perform these steps on individual client workstations](#)

ESET Security Management Center (ESMC) 7 User Permissions

This article assumes that your ESMC user has the correct access rights and permissions to perform the tasks below.

If you are still using the default Administrator user, or you are unable to perform the tasks below (the option is grayed out), see the following article to create a second administrator user with all access rights (you only need to do this once):

- [Create a second administrator user in ESET Security Management Center 7.x](#)

[View permissions needed for least privilege user access](#)

About the example below

In the example below, a group of client workstations will be configured to:

- Download updates using a proxy server when connected to subnet A (referred to as "Company Network").
- Download updates using the ESET update server when connected to subnet B (referred to as "Off Network").

[I. Configure the "Company Network" Dynamic group](#)

[II. Configure an "Off Network" Dynamic Group](#)

[III. Create "Company Network" and "Off Network" policies and assign them to groups](#)[Back to top](#)
