Issue

- [Create a home group](#)
- [Create a permission set](#)
- [Create a user](#)

Solution

Create new user in ESET Security Management Center 7

ESET Remote Administrator 6.5 and ESET Security Management Center 7 use an improved user security model which is different from previous versions. The user security model uses home groups, objects and permission sets.

Each user belongs to a **Home Group**, and can have multiple permission sets assigned. The Administrator's Home Group is **All**. If user has a access to a group, the user has the same access also to all child groups of that group. That is why **Administrator** can access all groups.

A user's Home group is a static group where all objects created by the user are stored. A user has access to all objects in their home group. Users with the same home group will have access to the same objects. Objects are always located in a static group. The term **Objects** refers to computers, devices, templates, policies, tasks, notifications, etc.

Permission Sets configure the access level for a specific group and determine the actions (**Functionalities**) which can be performed with the objects in the group.

This article provides a complete walkthrough guide for creating new users, including home group and permission set creation. There are three key steps in creating a user:

[I. Create a home group](#)

[II. Create a permission set](#)

[III. Create a user](#)

I. Create a home group

Each user needs to have a static group assigned as their home group. This group will contain all objects created by that user (unless the object is moved or the home group is changed). It is recommended that only the Administrator has the **All** home group. Multiple users can have the same static group assigned as their home group. An administrator that

manages multiple offices can create a static group for each office and assign it as the home group for the local admin. All groups are child groups of the **All** group, therefore the Administrator with the **All** home group has access to all of them.

To create a new static group to be the home group for a new user, follow these steps:

1. [Open ESET Security Management Web Console](#) (ESMC Web Console) in your web browser and log in. Click **More** → **Groups**, click the gear icon  next to the static group you want to use as parent group and select **New Static Group**.

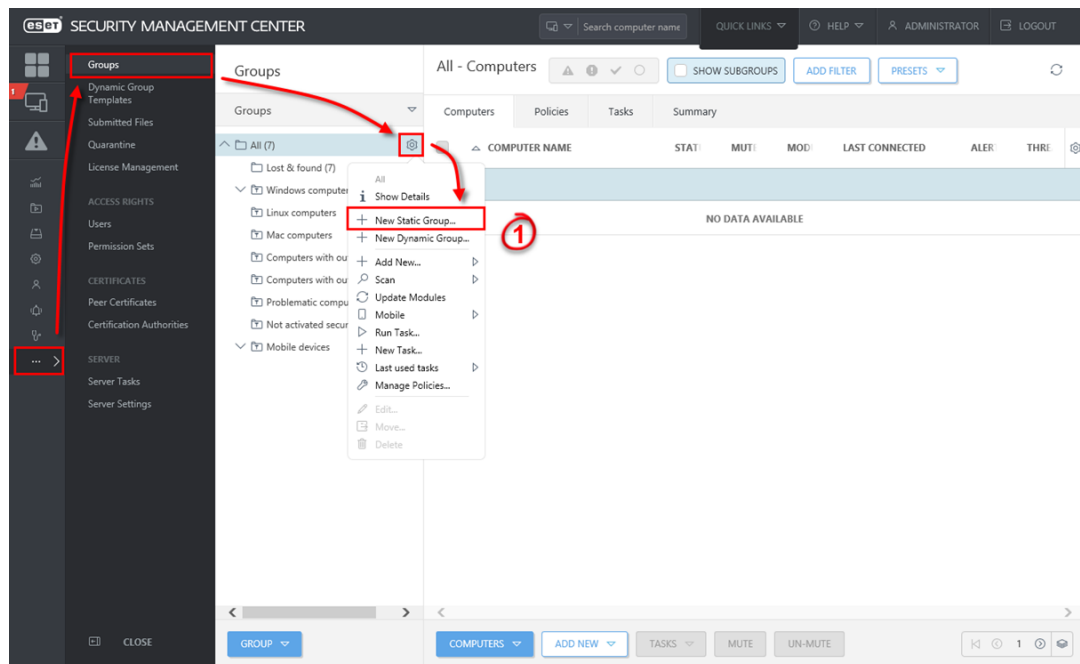

Figure 1-1

Click the image to view larger in new window

1. Type the **Name** of the new group. Optionally, you can add a **Description**. It is very important to choose the correct **Parent group**. Your new group will be located in the parent group and all users with access to the parent group will also have the same access to this new group. Click **Finish** to create the group.

II. Create a permission set

A permission set is a collection of rules that determines the level of interaction a user is allowed to have with the objects in the group the permission set is associated with. One permission set can be assigned to different users, but it is not necessary to assign it to a user at this time. Permission sets can be associated with multiple static groups. A permission set will automatically be applied to the objects in the subgroups of the static groups you select. Be sure to select a static group at the level of access you want your user to have. The objects in all groups below the static group you select will also be affected. The permissions for this permission set will be assigned in the **Functionality** section.

To create a new permission set, follow these steps:

1. [Open ESET Security Management Web Console](#) (ESMC Web Console) in your web browser and log in. Click **More** → **Permission Sets** → **New**.

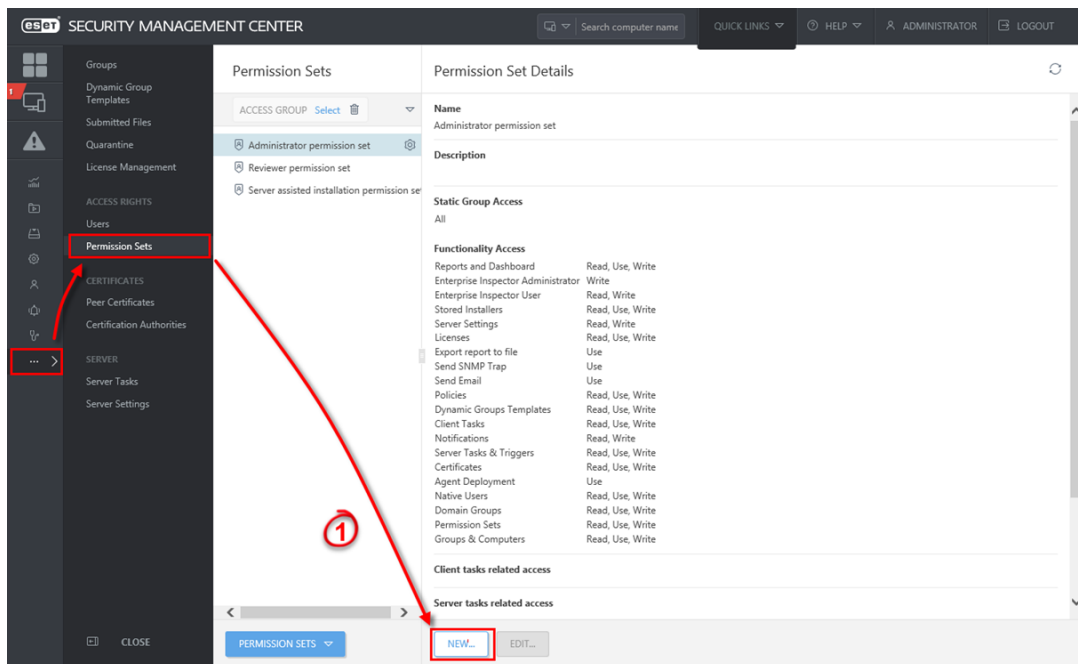

Figure 2-1

Click the image to view larger in new window

1. Type the name of the new permission set in the **Name** field. Optionally, you can type a **Description**.

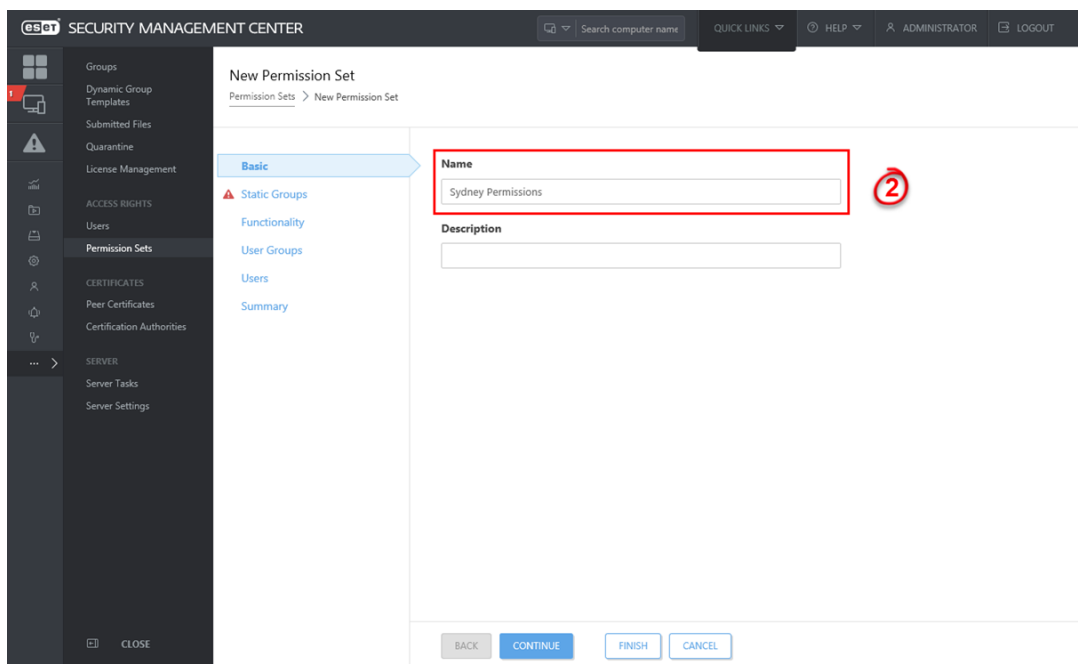

Figure 2-2

Click the image to view larger in new window

1. Click **Static Groups → Add static group(s)** and select the checkboxes next to the static groups that will be associated with this permission set. Select the group you created in part I. Click **OK** to confirm your choice.

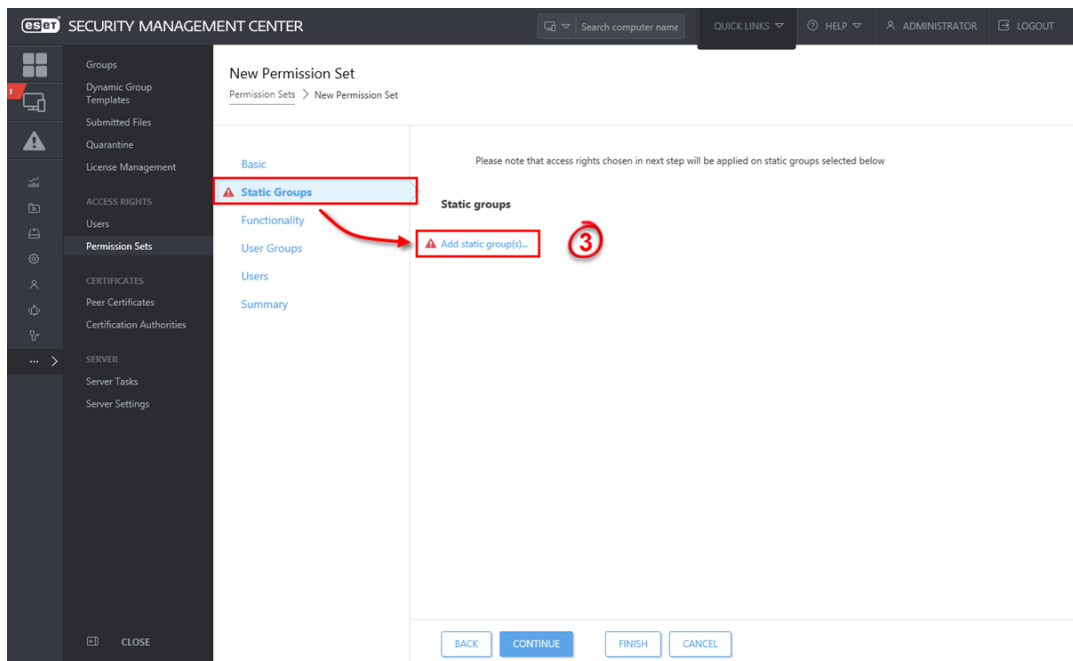

Figure 2-3
Click the image to view larger in new window

1. Click **Functionality**. You can select one of pre-defined permission models or manually select the access level for the user that will be assigned to this set. There are three different access levels: **Read**, **Use** and **Write**. Click the ▼ icon next to **Server Tasks & Triggers** and **Client Tasks** to expand the categories and select permissions for specific tasks. Read more about the functionalities in this [Online Help topic](#).

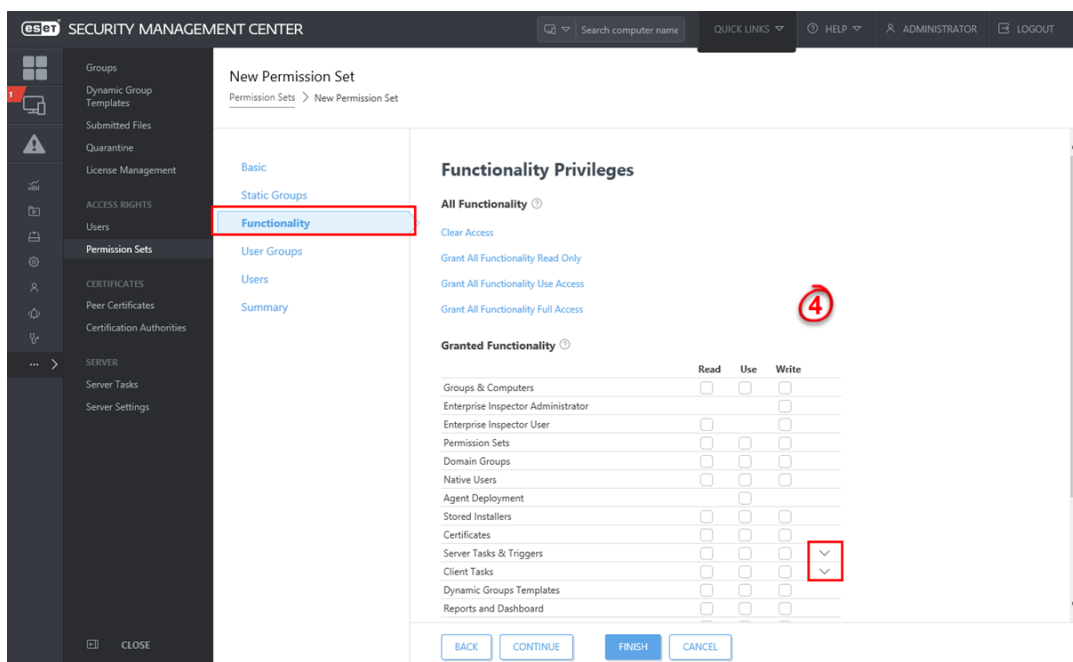

Figure 2-4

Click the image to view larger in new window

1. Click **User Groups**. If you want to assign this permission set to a group of users synchronized from your Active Directory, click **Add user group(s)**. It is not necessary to add a user group. User groups are managed in **Computer Users**.

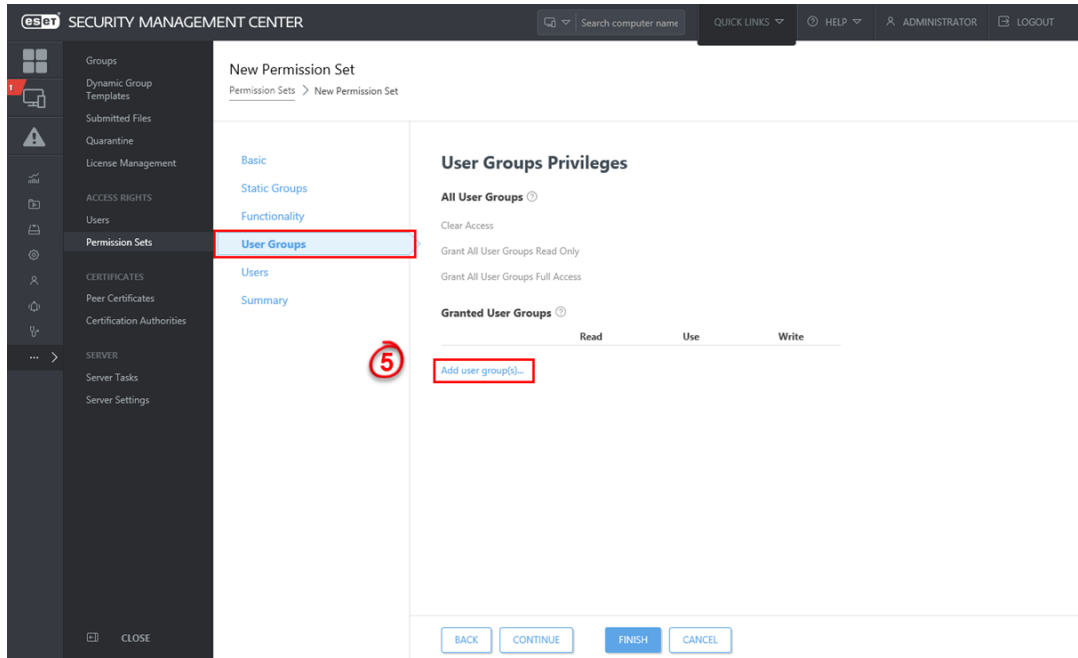

Figure 2-5

Click the image to view larger in new window

1. Click the **Users** section. You can assign this permission set to an existing user or to an existing Mapped Domain Security Group. Click **Finish** to create and save the new permission set.

III. Create a user

It is recommended to create a user as the last step so they can be assigned to the correct home group and permission set.

1. Navigate to **More → Users** and click **New**.

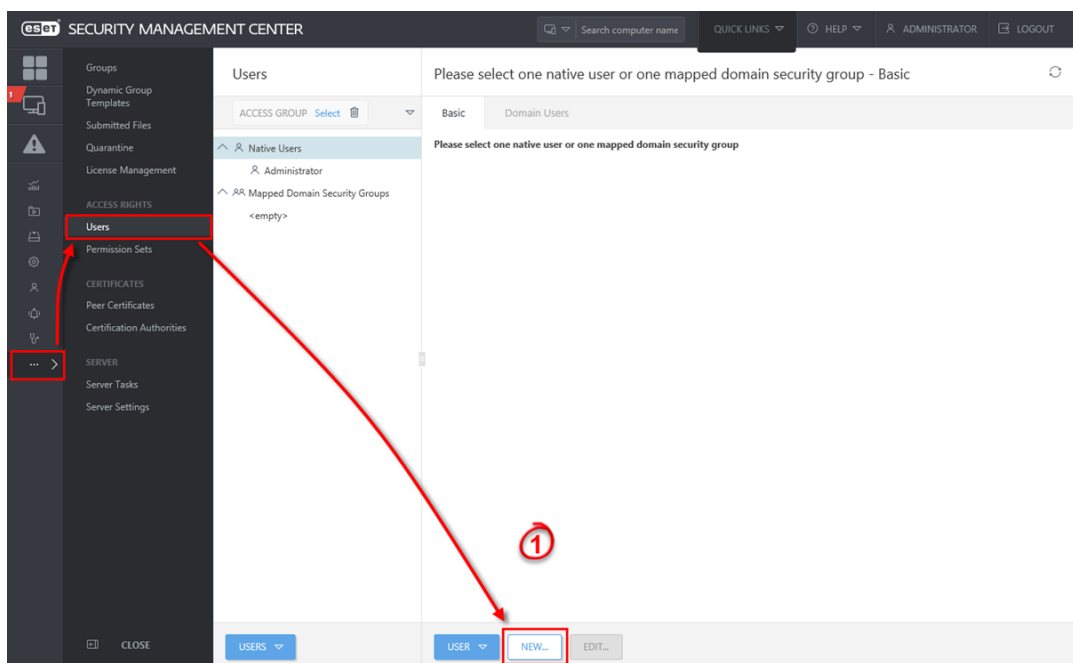

Figure 3-1
Click the image to view larger in new window

1. In the **Basic** section, type the new login name for the user in the **User** field.
2. Click **Select** under **Home group** and select the group you created in the part I. Users can only be assigned to one home group.
3. Type a secure password in the **Password** fields. This password will be required for the new user to login. Optionally, you can setup more settings in the **Account** section.

The screenshot shows the 'New Native User' configuration page in the CS-OT Security Management Center. The interface includes a dark sidebar on the left with navigation links for Groups, Users, and Servers. The main content area has a breadcrumb trail 'Users > New Native User' and tabs for 'Basic', 'Permission Sets', and 'Summary'. The 'Basic' tab is active and contains several input fields: a 'User' field (labeled 2) with the text 'admin_sydney', a 'Description' field, a 'Home group' dropdown (labeled 3) showing 'Sydney Office', and a 'Set Password' section (labeled 4) with 'Password' and 'Confirm password' fields. At the bottom of the form are buttons for 'BACK', 'CONTINUE', 'FINISH', and 'CANCEL'. A red arrow points from the 'Basic' tab to the 'User' field.
