Create IDS exclusions for client workstations in ESET Security Management Center (7.x)

Applies to: ESET Security Management Center | Product version: 7.x

Solution

Figure 1-1

Click the image to view larger in new window

1. Expand **Settings** → **Network Protection** → **Network attack protection** and click **Edit** next to **IDS exceptions**.

Figure 1-3

1. Select the **Alert**, type the **Remote IP address** (IP address of the machine with the software that scans the network).
Alternatively, to set up an IDS exclusion for a locally installed application, type the full path to the .exe file in **Application** (e.g. C:\Windows\system32\cmd.exe).
2. In the **Action** section, select **No** from each drop-down menu. Click **OK** → **Save** → **Finish** to save the policy. If this is a new policy, assign the policy to the correct groups. After the computers check in, they will get the policy change.
