

Create IDS rules for client workstations in ESET PROTECT (8.x)

Steeff | ESET Nederland - 2020-12-10 - [Comments \(0\)](#) - [Legacy](#)

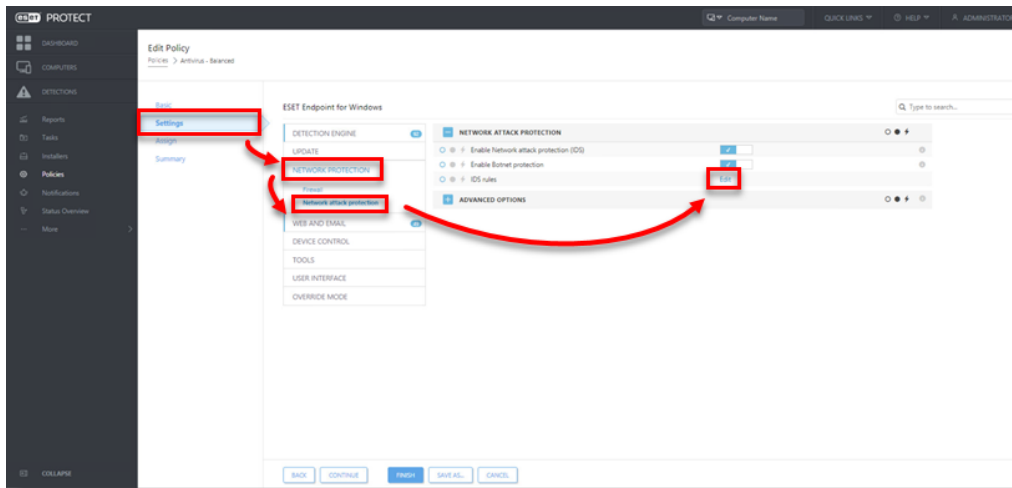

Solution

Create IDS exclusions in ESET PROTECT

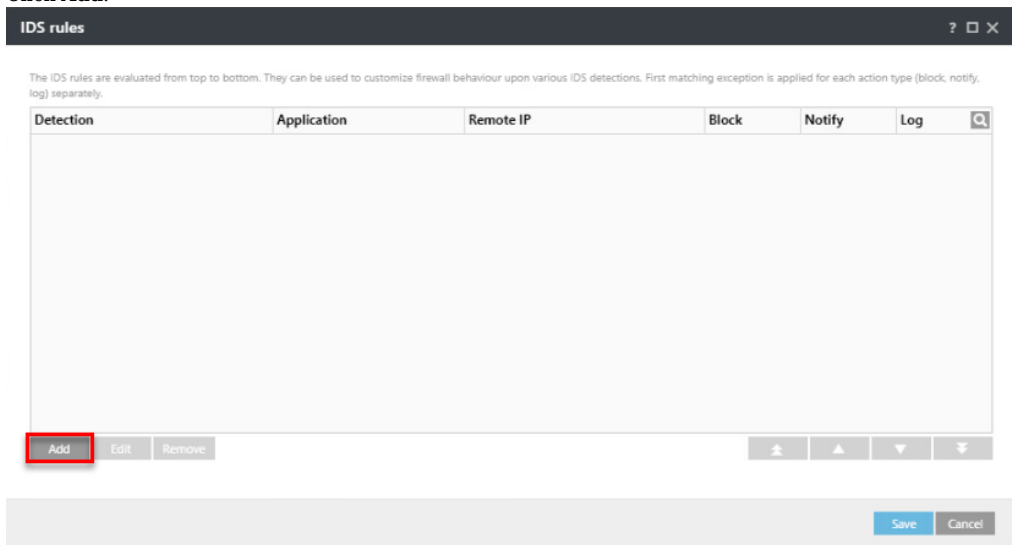

1. [Open ESET PROTECT Web Console](#) in your web browser and log in.
2. Click **Policies** → **ESET Endpoint for Windows**, then click the ellipses next to the policy you want to edit and click **Edit**.

3. Click **Settings** → **Network Protection** → **Network attack protection** and click **Edit** next to **IDS exceptions**.

4. Click **Add**.

- Select the **Alert**, type the **Remote IP address** (IP address of the machine with the software that scans the network).
Alternatively, to set up an IDS exclusion for a locally installed application, type the full path to the .exe file in **Application** (e.g. C:\Windows\system32\cmd.exe).
- In the **Action** section, select **No** from each drop-down menu. Click **OK** → **Save** → **Finish** to save the policy. If this is a new policy, assign the policy to the correct groups. After the computers check in, they will get the policy change.
