Error 0xC0010006 displayed when trying to start Full Disk Encryption

Anish | ESET Nederland - 2018-02-12 - Comments (0) - ESET Endpoint Encryption

When trying to start Full Disk Encryption if you see the error 0xC0010006 you may have a system which is configured in UEFI mode with Secure Boot. This is not supported by older versions of DESlock+.

DESlock+ supports Full Disk Encryption of machines configured with UEFI and Secure Boot, starting with Version 4.7.4. Please check the version of DESlock+ you have installed and upgrade if necessary.

Please see the [DESlock+ Client Download Page](#) to obtain the latest version.

If the problem persists, please contact DESlock+ support by creating a [Support Ticket](#)
