A new version has been released

Version 6 of ESET Remote Administrator (ERA) and ESET business products were released in North America December 11th, 2014, and globally February 25th, 2015. This article applies to version 5.x and earlier ESET business products. For information about what's new in the latest version and how to upgrade, see the following article:

What's new in ESET version 6 business products?

If you do not use ESET Remote Administrator to manage your network

If you have already configured an installation package and want to install it locally (without pushing from ESET Remote Administrator) follow our step-by-step instructions.

1. Open the ESET Remote Administrator Console by double-clicking the ERAC icon on your desktop, or by clicking **Start → All Programs → ESET → ESET Remote Administrator Console → ESET Remote Administrator Console**.

2. Click **Tools → Policy Manager**. Select the policy that you want to include with your install package and click **Edit Policy**.

4. Select a save location for your .xml file, type a name for it in the **File name** field and then click **Save**.

Figure 1-3

5. Close ESET Configuration Editor and ESET Policy Manager.

6. Click the **Remote Install** tab and then click **Actions → Manage Packages**.

Click the image to view larger in new window

7. Click **Add** in the **Installation Packages Editor** window.

Figure 1-5

8. Click **Download From The Web**, select the ESET product that you want to push install, download the installer file (your ESET-issued Username and Password will be required) and then click **Create**.

   Your installation can contain a 32-bit and 64-bit variant of the installer file, so that on networks with both 32- and 64-bit clients, one package can be pushed to all client workstations (the correct installer will run automatically). Repeat steps 6 and 7 to add a second file to your installation package.

9. Before saving the package, you have the option to either make changes to the configuration associated with this installation package, or to select a pre-configured ESET Configuration File

(.xml) that you would like to apply to this installation package. Click **Select**, navigate to the ESET configuration file that you saved in step 4, select and click **Open**.

10. Click **Save As**, type a name for your new installation package in the **Name** field and then click **Save**. Click **Close** to exit Installation Packages Editor.

To install a preconfigured package on a client workstation manually

If you have already configured an installation package and want to install it locally (without pushing from ESET Remote Administrator) follow our step-by-step instructions.
