How do I configure the ESET Remote Administrator Server to record logs to a Syslog server? (4.0)

Ondersteuning | ESET Nederland - 2025-03-07 - Comments (0) - 5.x

<https://support.eset.com/kb2785>

By default, ESET Remote Administrator Server logging is completed routinely. This data is normally saved as a text file to the following location:

%ALLUSERSPROFILE%\Application data\Eset\ESET Remote Administrator\Server\logs\era.log

Additionally, ESET Remote Administrator (ERA) allows administrators to send ERA server log data to a syslog server. To enable this functionality, follow the steps below:

1. Open the ESET Remote Administrator Console (ERAC) by double-clicking the ERAC icon on your Desktop, or by clicking **Start → All Programs → ESET → ESET Remote Administrator Console → ESET Remote Administrator Console**.
2. In the main program window, click **Tools → Server Options**.
3. Click the **Logging** tab and click the check box next to **Log to syslog**.

NOTE:

In the **Action Editor** window you can select the **Also Log message** option, which will write the message body to the log. You can also specify **Log Verbosity**,

which allows you to adjust the level of detail (Level 5 being the highest amount of detail, and Level 1 the lowest). **Level 2 - Above + Session Errors** is the recommended option.

4. Click **OK** to confirm the changes.

NOTE:

To edit advanced syslog settings, click to **Tools → Server Options**. Click the **Advanced** tab → **Edit Advanced Settings** and expand **ESET Remote Administrator → ERA Server → Setup → Logging** in the **ESET Configuration Editor**. Here, you can edit the options for the syslog server name, syslog server port, syslog facility and the syslog verbosity (see **Figure 1-2**).
