How do I obtain a workstation log?

Anish | ESET Nederland - 2018-02-07 - Comments (0) - ESET Endpoint Encryption

You may be requested to supply a Workstation log by our support team in order to investigate a problem report.

The Workstation log is an HTML formatted file that contains information of the configuration and current status of a workstation within an Enterprise Server.

To obtain a workstation log please follow the steps below:

Login to your Enterprise Server

Select the **Workstations** branch of the navigation tree.

Select the Workstation in question in the list of workstations.

Click the **Details** button.

Click the **Tools\Download Workstation Log** menu item.

When the browser offers to download a file save the downloaded file.
