How do I obtain a workstation log?

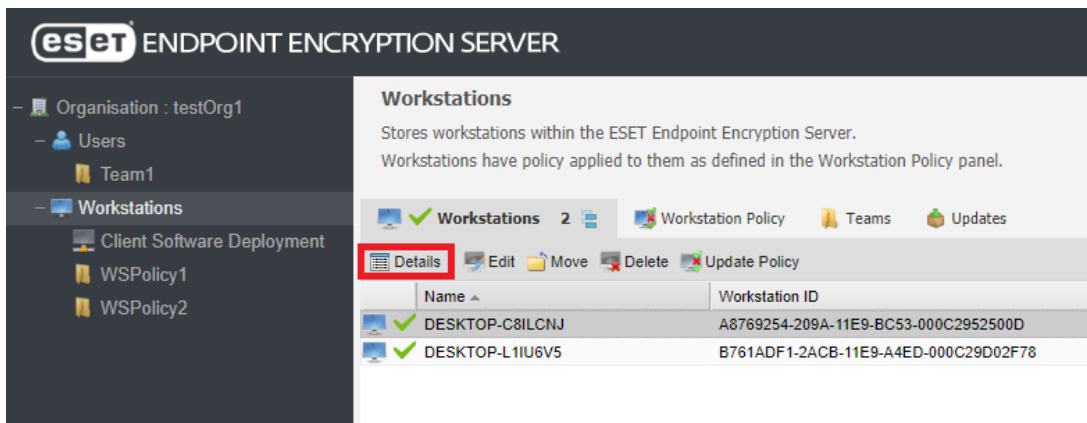

Anish | ESET Nederland - 2019-07-17 - Comments (0) - Diagnostics

You may be requested to supply a Workstation log by our support team in order to investigate a problem report.

The Workstation log is an HTML formatted file that contains information of the configuration and current status of a workstation within an Enterprise Server.

To obtain a workstation log please follow the steps below:

- Login to your ESET Endpoint Encryption (EEE) Server
- Select the **Workstations** branch of the navigation tree.
- Select the Workstation in question in the list of workstations.
- Click the **Details** button.

The screenshot shows the ESET Endpoint Encryption Server interface. The left sidebar contains a navigation tree with 'Workstations' selected. The main content area displays the 'Workstations' section, which includes a table of workstations. The 'Details' button is highlighted with a red box.

Name	Workstation ID
DESKTOP-C8ILCNJ	A8769254-209A-11E9-BC53-000C2952500D
DESKTOP-L1IU6V5	B761ADF1-2ACB-11E9-A4ED-000C29D02F78

- Click the **Tools\Download Workstation Log** menu item.

- When the browser offers to download a file save the downloaded file.
