When you edit or create a configuration .xml file in the ESET Configuration Editor, you still need to implement those changes on the client computers on the network. Use the following steps to apply the updated .xml configuration:

1. Open the ESET Remote Administrator Console (ERAC) by clicking **Start**  **All Programs**  **ESET**  **ESET Remote Administrator Console**  **ESET Remote Administrator Console**.
2. In the **Clients** tab, select the clients for which you would like to edit configuration settings (hold **CTRL** + click to select multiple clients). Right-click the selected clients and  select **New Task Configuration Task** from the context menu.

Figure 1-1

3. Click **Select...** and browse to the .xml file you created in the ESET Remote Administrator Console. Double-click the .xml file and click **Next**.

Figure 1-2

4. Drag and drop clients to which you want to apply your new configuration into the **Selected items** column and then click **Next**.
