## How do I replace my existing license with a new one in ESET File Security for Linux?

Ondersteuning | ESET Nederland - 2017-11-28 - Comments (0) - Legacy

<https://support.eset.com/kb3431>

1. Open a new Terminal window by clicking **Applications → Accessories → Terminal**.

**Figure 1-1**

2. Type the following commands in the order shown below and press **Enter** after each command. Enter your password when prompted (the cursor will not move as you type).

a. `cd /etc/opt/eset/esets/license`

b. `sudo rm esets_*.lic`

c. `cd /opt/eset/esets/sbin`

**Figure 1-2**

**Click the image to view larger in new window**

3. To verify that you have successfully removed your expired license, type the command shown below to restart the ESET service. You will receive the error notification **Cannot initialize scanner: License not found**, repeat step 2 if you do not receive this error.

```
sudo service esets restart
```

**Figure 1-3**

**Click the image to view larger in new window**

4. Type the command below to import your new license file. If you saved your new license file to your Desktop, the *location of new license file* will be similar to `/home/eset/Desktop/EFSW.lic` (see Figure 1-4).

```
sudo ./esets_lic --import location of new license file (for example /home/eset/Desktop/EFSW.lic)
```

**Figure 1-4**

**Click the image to view larger in new window**

5. Type the command below to restart the ESET service again. When you receive the notification **OK**, your new license has been imported successfully.

```
sudo service esets restart
```

**Figure 1-5**

**Click the image to view larger in new window**
