How do I upload a new client version into the Enterprise Server?

Anish | ESET Nederland - 2018-01-24 - Comments (0) - ESET Endpoint Encryption

Use the following steps to upload a new MSI client package to the Enterprise Server to make it available for download.

Go to the [Download page](#).

Select the architecture and language for the client installer you require then click the **Download** button and save the downloaded file.

Log into the Enterprise Server.

note: This applies to Enterprise Server version 2.7.0 and later.

In the Enterprise Server, click on **Client Software Deployment** located in the left hand window pane.

Select the **Install Package Management** tab.

Click the **Upload** button.

Click the **Browse** button.

Use the file browser to navigate to the new release of DESlock+ which you have downloaded, highlight it and then click **Open**.

note: This applies to Enterprise Server version 2.6.2 and earlier.

In the Enterprise Server, click on **Organisation: *organisation_name*** where *organisation_name* is the name of your organisation.

Select the **Client Installs** tab.

Click the **Upload** button.

Click the **Browse** button.

Use the file browser to navigate to the new release of DESlock+ which you have downloaded, highlight it and then click **Open**.

In order to download a merged install containing the new version please see this article: [KB217 - How do I download a merged install for installation on a Workstation?](#)
