How does a user check if their client software was obtained from an Enterprise Server?

Anish | ESET Nederland - 2018-01-26 - Comments (0) - ESET Endpoint Encryption

Right-click the DESlock+ Icon in the Notification Area (also known as the System Tray).

If the entry *Enterprise Sync* menu item is present you are a Enterprise Server managed user.

Alternatively if you select the *About DESlock+* menu item, the type of client is displayed next to the *Installation Type:* entry.
