Installing EFS using ESET Security Management Center

Mitchell | ESET Nederland - 2019-07-16 - Comments (0) - EFS for Linux

1. Make sure you are running ESET Management Agent v7.1.367.0 or later
2. Create a new Client task:

3. In the Basic section enter a name for the task and optionally give it a description:

4. Do the following in the Settings section:
 1. Optionally select a ESET License to be used to activate the product
 2. Select "Install by direct package URL" and insert the following url:
https://download.eset.com/com/eset/apps/business/efs/linux/v7/latest/efs.x86_64.bin
 3. Tick the checkbox for "I accept the terms of application End User License Agreement"
 4. Leave installation parameters empty

5. Optionally allow an automatic reboot if needed by ticking the checkbox.

The screenshot shows the ESET Security Management Center interface. On the left is a dark sidebar with navigation options: DASHBOARD, COMPUTERS, THREATS, Reports, Client Tasks (highlighted), Installers, Policies, Computer Users, Notifications, Status Overview, and More. The main content area is titled 'New Client Task' with a breadcrumb 'Client Tasks > New Client Task'. Below the title are tabs for 'Basic', 'Settings' (selected), and 'Summary'. The 'Settings' tab is active, showing 'Software installation settings'. This section includes: 'ESET license' with a '<Choose ESET License>' link; 'Package to install' with two radio buttons ('Install package from repository' and 'Install by direct package URL', the latter selected) and a text field containing 'https://download.eset.com/com/eset/apps/business/efs/linux/v7/latest/efs.x86_64'; a checked checkbox for 'I accept the terms of application End User License Agreement'; 'Installation parameters' with an empty text field; and 'Automatically reboot when needed' with an unchecked checkbox. At the bottom are four buttons: 'BACK', 'CONTINUE', 'FINISH' (highlighted in blue), and 'CANCEL'.

5. Save the task by clicking on finish.

6. Schedule it to the computer(s) you want to install ESET File Security for Linux on.
