## Missing libQtWebKit dependency on CentOS Linux (ESMC 7.x)

Anish | ESET Nederland - 2018-09-12 - Comments (0) - ESET Security Management Center

### Issue

- libQtWebKit package is not available on CentOS Linux operating system
- Reports cannot be generated from ESMC Web Console
- The following error message is displayed in log files:

```
Error: CReportPrinterModule [Thread 7f5f4c7b8700]:  
ReportPrinter: ReportPrinterTool exited with:  
/opt/eset/RemoteAdministrator/Server//ReportPrinterTool: error  
while loading sh red libraries: libQtWebKit.so.4: cannot open  
shared object file: No such file or directory [code:127]
```

### Solution

Qt4 WebKit libraries are required - Used for printing reports to PDF and PS format (must be version 4.x, not 5).

### Important!

Check to see if the problem is resolved after each step. If not, proceed to the next step until the problem is resolved.

1. Run the following command in Terminal (as root or with sudo) to install libQtWebKit directly from Fedora repositories.

64-bit operating systems:

```
yum install
```

```
https://dl.fedoraproject.org/pub/epel/7/x86_64/Packages/q/qtwebkit-2.3.4-6.el7.x86_64.rpm
```

32-bit operating systems:

```
yum install
```

```
https://dl.fedoraproject.org/pub/epel/6/i386/Packages/q/qtwebkit-2.1.1-1.el6.i686.rpm
```

2. Verify the presence of remaining [ESMC Server prerequisites](#). All mandatory prerequisites must be met.
3. Compile and install the libQtWebKit source package using the following instructions (Advanced Linux users only):

- <https://trac.webkit.org/wiki/BuildingQtOnLinux>

If you are still unable to resolve your issue, please [contact ESET technical support](#).
