"Package not found" error when deploying from an existing software install task (7.x)

Anish | ESET Nederland - 2018-09-14 - Comments (0) - ESET Security Management Center

Issue

- You receive the error "Task failed-try to install software manually" in ESET Security Management Center when using an existing software install task
- You receive the error "Package not found" on client workstations
- You are deploying a new ESET product version using the ESMC repository

This error will appear in the ESET Management Agent trace log, which is located at the following location:

C:\Programdata\ESET\RemoteAdministrator\Agent\EraAgentApplicationData\Log\Trace.log

On Windows XP:

C:\Documents and Settings\All Users\Application Data\ESET\RemoteAdministrator\Agent\EraAgentApplicationData\Log\

Solution

If you are deploying or upgrading an ESET endpoint product using a push install from the ESET Security Management Center repository, the latest ESET product version will be selected. When deploying a new product version, you should create a new [software install task](#).

Use the push installation instructions for installing from the repository in the following ESET Knowledgebase article:

- [Deploy or upgrade ESET endpoint products using a push install \(7.x\)](#)

You can edit an existing software install task instead of creating a new one

In step 2 of the Knowledgebase article above, you can select your existing software install task to edit. This will allow you to keep the list filtering.
