Remote install methods using ESET Remote Administrator

Ondersteuning | ESET Nederland - 2025-03-07 - $\underline{\text{Comments (0)}}$ - $\underline{\text{Legacy ESET Remote Administrator (6.x / 5.x / 4.x)}}$

Remote installation of any ESET client solution using ESET Remote Administrator can be performed using one of three methods: **Push**, **Logon Script**, or **Email**.

Push (Windows NT/2000/XP/Vista/7 only)

- 1. Authorization is necessary on the workstation where the remote installation is to occur. At the beginning of the installation, the administrator username and password must be entered.
- 2. Connection to the ADMIN\$ folder is established and the installation agent (small program) is copied to the client workstation.
- 3. Agent is registered as a service and executed with administrator rights.
- 4. Agent connects to server (TCP/IP), initiating the installation.

Logon Script (Windows NT/2000/XP/Vista/7)

- 1. Agent initiates installation from the server.
- 2. Server starts PUSH installation process.

Email, Logon Script (Windows NT/2000/XP/Vista/7)

1. Agent connects to the server (TCP/IP), downloads the installation package and starts the installation.

More information, including detailed instructions on the configuration of ESET Remote Administrator, can be found in the <u>ESET Remote</u> Administrator User Guide.
