Specific tasks are re-triggered after an upgrade to the latest version of ESET PROTECT and ESET PROTECT Cloud

Steef | ESET Nederland - 2021-11-04 - Comments (0) - ESET PROTECT On-prem

Issue

- After you upgrade to ESET PROTECT 9.0 from an earlier version or after an automatic upgrade of ESET PROTECT Cloud to version 3.0, all Tasks with Trigger type **Scheduled** or **CRON** and with option **Invoke ASAP If Event Missed** checked get executed one time immediately after the upgrade
- Generate a report of all the scheduled and CRON tasks in ESET PROTECT
- Before an upgrade, review all the tasks and change or remove tasks that could cause unwanted effects
- After an upgrade, consider the effects of the task execution on your environment (**for example: This could initiate unwanted software installs tasks (potentially with reboot) to servers and clients**)

Solution

Generate a report of all the scheduled and CRON tasks in ESET PROTECT

An export of the report created below is attached for you to import, see the bottom of the this page to download and import the report in ESET PROTECT.

1. Open the ESET PROTECT Web Console in your web browser and log in.

2. Click **Reports** → **New Report Template**.

3. In the **Name** field, type a name for your report. Click **No category selected** and in the dialog window, select a check box next to one of the categories (in this example, **Server performance**) and click **OK**.

New Report Template Reports > Scheduled Tasks Report				
A Basic	Basic	E.	Please select item	2×
A Chart	Name		NAME DESCRIPTION TAGS	٢
