Stop managing client computers in ESET Security Management Center (Uninstall ESET Management Agent)

Anish | ESET Nederland - 2018-09-12 - Comments (0) - Endpoint Management

Issue

• Uninstall the ESET Management Agent

Solution

Remove password protection before you uninstall the ESET Management Agent

We strongly recommend that you <u>remove any configuration passwords</u> that you have set on client workstations before running this task. Failure to do so can make it difficult to access settings after the ESET Management Agent has been removed.

- Open ESET Security Management Web Console (ESMC Web Console) in your web browser and log in.
- 2. Click Client Tasks, select Stop Managing (Uninstall ESET Management Agent) and then click New.

Click the image to view larger in new window

Type a name for your new Client Task into the Name field. Optionally, enter a
description in the Description field and then click Finish to select targets for your
task.

Click the image to view larger in new window

- 1. Click **Create Trigger** when you are asked whether you want to add a trigger for the client task. Click for instructions to <u>create a Trigger and add Target computers or groups to execute a Client Task (7.x)</u>
- 2. Your task will be sent to clients. You may need to remove them from the ESMC Web Console after you uninstall ESET Management Agent.
