Issue

If it is February 29th, or the system date is set that way, the installation process of ERA 5 fails.

Solution

If trying to install ESET Remote Administrator 5 on February 29th, or on a machine having system date set to February 29th, but the installation process fails, then there is a simple workaround - set the system date temporarily to any other date, e.g. February 28th, and execute the installer again.
