Verify that your Microsoft Access (MA) driver is present on your operating system. This can be done by doing one of the the following:

Check the system and user temp folders to make sure that there is no issue with rights. To do this [click here](#).

Check the following registry entry for the reg key "Microsoft Access Driver (*.mdb)":

HKEY_LOCAL_MACHINE\SOFTWARE\ODBC\ODBCINST.INI

Verify the MA driver (*.mdb) is present on that operating system. For Vista 32 bit open c:\windows\system32\odbcad32.exe. For Vista 64 bit open c:\windows\syswow64\odbcad32.exe. Run odbcad32.exe and verify if there is "Microsoft Access Driver (*.mdb)".
