Which databases does ESET Remote Administrator (5.x) support?

Ondersteuning | ESET Nederland - 2025-03-07 - Comments (0) - 5.x

<https://support.eset.com/kb963>

A new version has been released

ESET Remote Administrator (ERA) 6 and ESET version 6 business products were released Dec 11th, 2014. Database requirements for ERA 6 are different than those for ERA 5.x:

[View database requirements for ESET Remote Administrator 6](#)

[Visit our ERA 6 FAQ to learn more about ESET Remote Administrator 6](#)

By default, ESET Remote Administrator uses the Microsoft Access (Jet Database) engine. The following databases are also supported:

- Microsoft SQL server
- Oracle
- MySQL (version 4.1 and later)

The database type can be selected during installation of the ESET Remote Administrator Server (ERAS) and cannot be changed after installation. To select the database type during ERAS installation, select **Advanced (Fully customized installation)** in the **Select type of installation** window (see **Figure 1-1**) and click **Next**. When you reach the **Select database** window, select **MS Access (built-in)**, **MS SQL server**, **Oracle**, or **MySQL** depending on the database you are using (see **Figure 1-2**). All options will require further configuration.

NOTE:

For additional information on database types, please see section 2.2.3.4 (**Database types supported by ERA Server**) in the [ESET Remote Administrator User Guide](#).
