A new version has been released

Version 6 of ESET Remote Administrator (ERA) and ESET business products were released in North America December 11th, 2014, and globally February 25th, 2015. This article applies to version 5.x and earlier ESET business products. For information about what's new in the latest version and how to upgrade, see the following article:

[What's new in ESET version 6 business products?](#)

ESET Remote Administrator uses TCP ports **137** and **445** to use the *Get Info* feature from a workstation. These ports need to be open both on the server and on the client workstation's firewall.
