Why do I not see the new graphical FDE login screen?

Anish | ESET Nederland - 2018-03-07 - Comments (0) - ESET Endpoint Encryption

Problem

Instead of seeing the new graphical pre-boot Full Disk Encryption (FDE) login screen like this:

You see the original 'text mode' pre-boot FDE login screen like this:

Cause

The graphical pre-boot FDE login screen is only available on UEFI systems on version 4.9.0 or later of DESlock+. This means that Legacy/MBR systems are not supported.

To find out whether your machine is UEFI or Legacy, please follow one of the methods below:

Method 1:

If the version number displayed in the top right-hand corner of the pre-boot FDE login screen does **not** show the letters 'US' or 'UM' at the end of the number, then your machine is Legacy/MBR and is not supported.

Method 2:

Step 1:

From within Windows, press **Win+R** (or search **Run** in the Windows Start

Menu) to open the Run dialog.

Step 2:

Type **msinfo32** and click **OK**.

Step 3:

In the **System Summary**, look at the **BIOS Mode**. This will either show UEFI or Legacy.

Please note: this information is only displayed on Windows 8 or later.
