ESET Endpoint Antivirus for Linux 10 BETA

2023-05-09 - Mitchell | ESET Nederland - Comments (0) - Technology

We are pleased to announce BETA availability of the version 10 of ESET Endpoint Antivirus for Linux.
As the feedback from real-life deployment is very important to ensure the high quality of our products, we would like to invite you to participate in this BETA program.

To mention just few of the new features and improvements:

- Web access protection to scan HTTP and HTTPS communication
- Advanced Machine Learning – a high-powered detection engine in the cloud
- Detection level settings in Real-Time & Machine Learning protection
- Added Direct cloud communication module to enable receiving instant notifications from various ESET services
- Improve stability of the On-Access protection
- Added support for RHEL 9 and Linux Mint 21
- Added Ukrainian localization
- Various under the hood improvements and fixes

Installation packages and more information can be found on the ESET Forum (account required for download)
