ESET Endpoint Encryption Client version 5 and Server version 3 have been released and are available to download.

ESET Endpoint Encryption Server Changelog

Version 3.0.0.0

- Added: Support for ESET Endpoint Encryption installs
- Added: Support to auto re-initialise database resource if in maintenance mode
- Added: Padding to tables in group policy display for readability
- Changed: Rebranded software to ESET Endpoint Encryption Server
- Changed: When in maintenance mode, if SQL configuration exists an attempt will be made to re-initialise the connection
- Fixed: Problem clearing licence flags during re-sync
- Fixed: Problem using self-enrolment with auto encryption together
- Fixed: Problem with starting service a second time on some processor types
- Fixed: Issue with password validation failure when performing some commands
- Fixed: Issue when generating activation codes in a list with only a single user

ESET Endpoint Encryption Client Changelog

Version 5.0.0.0

- Added: Full Disk Encryption now supports OPAL self-encrypting drives (SED) (Managed client only)
- Changed: Rebranded software to ESET Endpoint Encryption Server
- Improved: Updated the legacy (MBR) Full Disk Encryption bootloader to work around a problem caused by HitmanPro and any 3rd party tools that silently block writing to the MBR. These tools could cause a Full Disk Encrypted system to no longer boot after upgrading ESET Endpoint Encryption.
- Improved: The new Maintenance Mode previously introduced in DESlock+ v4.9.2 is now supported on legacy, non-UEFI, machines. (Enterprise Client only)
- Improved: Updated self-heal process performed after a Windows 10 feature update.
- Improved: Outlook Add-in no longer shows as failed to load when blocked by policy. It now shows as loaded, but does not add UI elements to Outlook. (Enterprise Client only)
- Improved: Command-line tool (dlpcmd) has new commands to retrieve Workstation ID and maintenance mode status. Added support for legacy maintenance mode and several minor bug fixes.
- Fixed: SSO would not update if a password was changed twice or more times in the same session.
- Fixed: There was problem during activation when the system default keyboard had a long name. (Managed client only)
- Fixed: ESET Endpoint Encryption Go could experience a performance dip when copying multiple files on Windows 10.
- Fixed: Fixed a problem with Outlook Add-in registration. The x86 add-in would not be registered on x64 Windows if installed before Outlook. (This only occurred with DESlock+ v4.9.4)
- Fixed: Outlook Add-in would crash if a signature containing an image was used and the mail format was set to RTF.
- Fixed: In some rare cases when using Mobile Device Compatilbity Mode the Outlook Add-in could crash

when sending an e-mail to an exchange mail group.
