ESET Full Disk Encryption version 2.4.4.0 has been released

2026-08-26 - Steef | ESET Nederland - [Comments \(0\)](#) - [Feature release](#)

A feature update of ESET Full Disk Encryption 2.4.4.0 has been released.

Changelog

- New: Added support for the Microsoft UEFI CA 2023 certificate, helping ensure compatibility with the latest platform security requirements.
- Improved: Support for partition layout changes on encrypted disks. Including Windows 11 recovery partition resizing scenarios.
- Improved: Ability to repair disk layout discrepancies, where the layout had been changed before support was introduced.
- Improved: Updated product terminology to align with current ESET subscription and licensing terminology.
- Improved: Improved service reliability during startup.
- Fixed: Fixed several issues affecting encrypted secondary drives, including problems that could cause drives to become inaccessible after a restart or data corruption during encryption.
- Fixed: Fixed an issue where automatic updates were not working.
- Fixed: Fixed an issue where the encryption status of a device could be reported incorrectly by products using the OPSWAT integration, following an upgrade or repair.
- Fixed: Fixed an issue where systems encrypted with a TPM would report as not utilizing the TPM
- Fixed: Fixed an issue where, after the update to 2.4, systems that have had their partition layouts changed on previous versions of EFDE would become RAW on secondary partitions.
- Fixed: Fixed an issue where removable devices that have no media will cause the system to crash
