- Phase two: 100% throttling, starts on the 17th of December 2024

Changelog

- NEW: Mail quarantine integration with ESET PROTECT On-Prem.
- NEW: Quarantine reports can now be set up for administrators outside of the domain.
- NEW: Support for On-demand Vulnerability scan for Vulnerability and Patch Management.
- NEW: Vulnerability and Patch Management logging capability both locally and reporting to ESET.
- NEW: Authenticated received chain verification support.
- NEW: New macros available to use with rule "Send mail notification".
- NEW: RDP Access restriction feature.
- IMPROVED: Modification of body of Base64 encoded emails.
- IMPROVED: Brute force attack protection was extended to cover MS SQL and MySQL protocols.
- IMPROVED: Various Override mode modifications for better security and user

experience.

- IMPROVED: Support for URL analysis in document-reference headers.
- IMPROVED: Macros available for rules are now more unified and with better explanation.
- IMPROVED: Performance improvements of agent priority setting both in GUI and ESET Shell.
- IMPROVED: Local mailbox counting in domains with multiple sub-domains.
- CHANGED: ESET Mail Security now uses the Replay directory instead of Pickup directory on the Exchange Server to send internal notifications and reports.
- CHANGED: Emails sent to journaling mailboxes will not be quarantined.
- CHANGED: “Report a phishing site” was moved to setup/server for improved usability.
- FIXED: Incorrect display of sender’s IP address in SMTP protection logs.
- FIXED: Modification of subject of phishing messages now works when detected during the on-demand scan.

Please note, this feature update has impact on the support level status of previously released versions:
