ESET PROTECT Cloud users will be upgraded to Endpoint version 7.3

2021-03-09 - Mitchell | ESET Nederland - Comments (0) - Customer Advisories

> **ESET Endpoint 7.0, 7.1 and 7.2 users**
> This article only applies to Windows users of ESET Endpoint 7.0, 7.1, and 7.2 that are connected to ESET PROTECT Cloud

Beginning March 30, 2021, ESET PROTECT Cloud users with SHA-256 compatible machines will be remotely upgraded to ESET Endpoint 7.3. The rollout of the upgrade can take up to two weeks.

The remote upgrade will only happen for users with 250 seats or less. For example, if a user has a mixed environment, the remote upgrade will not be applicable for some machines; only the applicable machines will be upgraded.

As a user, you do not have to perform any action to receive the remote upgrade. The upgrade finishes after the restart of a computer.

We encourage our users always to download the latest version of their ESET products to maintain full support.

See our Knowledgebase article for more information on the latest supported versions of ESET business products.
