Release announcement: DEM plugin for ConnectWise Automate v1.8

2024-03-20 - Steef | ESET Nederland - Comments (0) - Releases

ESET Direct Endpoint Management plugin for ConnectWise Automate Service Release 1.8 has been released and is available to [download](#).

Changelog:

- Added: Support for 64-bit Control CenterDEM
- Added: Ability to send a Deactivation command to Windows, Mac and Linux endpoints
- Added: Languages available for deployment in the plugin—we now support English, German, Dutch, Italian, Ukrainian, Portuguese, French, Japanese, Turkish and Polish
- Changed: Logging in to EMA via the License Management portion of the plugin will now automatically update the activation credentials used by licenses that have already been imported using License Management (NOTE: This is to fix an issue where changing the EMA credentials would force the Admin to update the licenses within the integration manually)
- Changed: Added the ability to exclude specific computers from automatic deployment via the blacklist
- Changed: Added a new column to the automatic deployment blacklist to help identify computers in the case where multiple clients/locations have similarly named computers
- Changed: To provide support for the 64-bit Control Center, it was necessary to remove the Migration Assistant feature in the integration. This should have a low impact as this feature was originally designed to help transition from the old plugin that is now End of Life.
- Fixed: An issue that would cause the activation to fail on an already activated EEE endpoint
