Release announcement: Endpoint Antivirus for macOS version 7.4.1500.0 (hotfix)

2023-10-30 - Steef | ESET Nederland - Comments (0) - Servicing update

I'm pleased to announce that we have managed to release a hot-fix version of ESET Endpoint Antivirus for macOS (v7). This build is available on our global website and in the repository. It is now safe to use the PCU to upgrade.

Build number: 7.4.1500.0

Changelog:

- Fixed: The product sometimes losing FDA after OS restart
- Fixed: PCU update by OS restart no longer breaks the product
- Fixed: Web access protection issues after upgrade from version 6
