Release announcement: ESET Endpoint Antivirus for macOS 7.1.1700

2022-06-14 - Steef | ESET Nederland - Comments (0) - Releases

I want to inform you that today **ESET Endpoint Antivirus for macOS 7.1** was released.

The main feature is long-awaited native ARM support allowing for more effective running on Apple's M1 chip line (or M2 once released). During July, we plan to release an updated ESET Management agent with native ARM support as well.

Release notes:

- NEW: Native support for Apple Silicon (ARM architecture)
- New: Refreshed Application icon
- New: Added information about available macOS updates to protection statuses
- New: Desktop notification for Removable media access
- Improved: Handling of system notifications in case of many detections
- Improved: Performance of scanning when evaluating performance exclusions
- Improved: Performance of scanning when cleaning a large number of infections
- Improved: Memory resource management when detecting a large number of infections
- Improved: Scanning of Email files present in Threatsense parameters is enabled by default
- Fixed: Application shows alert about Web and Email protection even though it is disabled via PROTECT policy
- Other minor improvements affecting performance, security, stability, and usability
