## Release announcement: ESET Endpoint Encryption Server v3.5.0.365

2022-12-14 - Steef | ESET Nederland - Comments (0) - Releases

### Changelog for ESET Endpoint Encryption Server 3.5.0.365:

- Improved: The All-In-One (AIO) installer now uses SQL 2019 for fresh and upgraded Encryption Server installations
- Improved: EEE Servers that were not installed using the AIO installer can connect to SQL 2019
- Improved: Improved handling of large numbers for workstations and users
- Improved: Various localization improvements
- Improved: HTTPS is enabled by default on fresh installations
- Fixed: OpenSSL now upgrades when using the AIO installer
- Fixed: Problem where the FDE recovery menu was shown when the user did not have the correct permission set
- Fixed: Problem where activation codes would not be copied to the clipboard on Chrome and Edge browsers
- Important: After upgrading with the AIO installer some file locations may have changed. More details [support.eset.com/kb8350](https://support.eset.com/kb8350)
- Important: Server 2008 no longer supported (Server 2008 R2+ continues to be supported)

Installation packages are available in the [download section of our website](#).
