Release details:

• Release date: May 30, 2022

• Product: ESET Mail Security for Domino Server - 9.0.14005.0

Type: Major releaseAvailability: Global

Changelog

IMPROVED

- $\circ~$ Database scan remaining time indicates real-time as it is for computer scan
- A time limit option was added to scheduled On-demand scans to have the possibility to stop the scan after a defined period of time automatically
- o Possibility to automatically load internet domains from the Global Domain document
- o SPF: possibility to verify MAIL FROM domain first before HELO domain
- When the database scan is running, the tray icon has the status "Database scan is running"

• ADDED

- $\circ\;$ Issue switcher to the ekrn plugin to display statuses was added
- $\circ\;$ Application status for paused AntiPhishing protection was added
- o An automated screenshot of the EMSL product was added

• FIXED

- "Mail server antispam protection disabled" was replaced by the new wording "Mail server antispam protection paused" is now fully functional
- The server scan task started successfully with the Domino database containing a larger amount of mailboxes
- $\circ\;$ AV alarm in ESET INSPECT console (agent log error) works now properly
- o "Rules applied" count updated in real-time while running Database Scan
- o Database scan is now possible to be stopped by the user
- o GUI freezing issues fixed when user clicks on Database scan
- $\circ\,$ GUI issue with checkbox 'Scan excluded databases' is now marked according to the user preferences
- o Advanced setup is now fixed when the uPCU update type is changed
- o Status messages about cleaning settings are now shown properly
- $\circ\;$ Quarantine threat name in attachment envelope is now shown correctly
