- Added: Filtering options in Computer details - Installed Applications screen
- Added: Ability to deploy LiveGuard on all devices in a static group via context menu action
- Added: Ability to reset default filters
- Added: Computer preview - ability to reset displayed sections to the default
- Added: Ability to modify Computer name and Description directly from the Computer preview panel
- Added: Ability to mute/unmute Computer directly from the Computer preview panel
- Added: Static Group name in Syslog events
- Added: Ability to see the progress of removing client tasks
- Added: Ability to filter unassigned policies in the Policies section
- Added: Ability to sort policies in the "Last Modified By" column
- Added: Support for time-elapsed (duration) filters in Dynamic Groups
- Added: Section name as a prefix in the browser tab title
- Added: Comma separator for thousands place in table numbers
- Improved: VDI support (mostly improvements around instant clones)
- Improved: Table numbers are now aligned right
- Improved: Filter Advisor remembers item sorting
- Improved: Network Adapters (part of Computer details - Details - Hardware) are more readable in IPv4/IPv6
- Improved: Multiplatform support when deploying or enabling features via Solutions in the Computer context menu
- Improved: Information in the Detection type column is split into two separate columns: Detection Category and Type
- Improved: Selecting a product from the repository in the Software Install task
- Improved: Inspect button display is now dependent on the permission set in "Access to ESET Inspect"
- Improved: Filtering by Detection Type
- Improved: New version of Log Collector (version 4.6.0.0) in Management Agent
- Improved: Creation of New Report Template for newly created Report category
- Improved: Example section in the "Select time interval" filter
- Changed: Limit from 100 to 1000 when opening selected objects
- Changed: Disabled optional use OPAL in built-in encryption policy "Encrypt all disks - Recommended"
- Changed: "Outdated Components" renamed to "Server components"
- Changed: Minimal throttling for Client Tasks and Server Tasks was changed from 15 minutes to 1 minute
- Fixed: Save filter set is not working correctly in all sections
- Fixed: Specific scenario causes license sync breakage (if static group below company has the same name as a site that is created in EBA)
- Fixed: When you load a saved filter set, it is not applied unless you edit it (various sections)
- Fixed: Filter "? # OF ALERTS" is not working correctly (Computers section)
- Fixed: AD Synchronization server task fails if the target group is "All" and groups are being removed
- Fixed: "Log Into Domain" login screen check box selection is not remembered after logout
- Fixed: License for AIO installer is mandatory

- Fixed: The license list occasionally disappears when scrolling through a long License Management list
- Fixed: The date/time filter does not work correctly on the localized web console
- Fixed: All policies are hidden except auto-update when logging in to the console for the first time
- Fixed: Info message about default value for time-based criteria in Notifications is shown when it is not mandatory
- Fixed: Network adapter(s) screen informs that the latest version of an agent is required, even though the latest version is installed
- Fixed: Default presets for Computers/Detections sections are overwritten in a special scenario
- Fixed: Inaccurate problem count in License Management badge in specific scenarios
- Fixed: Missing limit for quarantine management actions, which causes an error message in some cases
- Fixed: HW inventory reports the TPM manufacturer version instead of the specification version
- Various other minor improvements and bug fixes
