Release announcement: ESET Server Security for Microsoft Windows Server 9.0.12013.0 - Auto-update (hotfix)

2022-07-20 - Steef | ESET Nederland - Comments (0) - Servicing release

I would like to inform you about a release of **ESET Server Security for Microsoft Windows Server 9.0 hotfix** through auto-update (uPCU).

A release through auto-update channel is a natural follow-up of update process introduced in version 9.0. However, major version 9.0 (build 9.0.12012.0) was not released through auto-update channel, due to issues related to updating found during a safety period after the standard global release (web & repository). Therefore, this hotfix version (build 9.0.12013.0) is the first release of auto-update channel for version 9.0.

Please find more information about release details and changelog below.

Release details:

- **Release date:** 18 July 2022
- **Product:** ESET Server Security for Microsoft Windows Server - 9.0.12013.0
- **Type:** Major release
- **Availability:** Global excl. Japan

Changelog:

- FIXED: Issues with upgrading to the latest product version
- FIXED: Issues to uninstall a product version
- FIXED: Machine deadlock after a reboot
