Create a second administrator user in ESET Security Management Center 7.x

Anish | ESET Nederland - 2020-01-10 - Comments (0) - ESET Security Management Center

lssue

- Create a new user and grant access rights and permissions
- You are unable to perform an ESMC task because the option is greyed out

Details

Access rights in ESET Security Management Center (ESMC) 7.0 and later allow you to define which objects a given user can manage and which tasks that user can carry out. For a more detailed look at how access rights function in ESET Security Management Center, see the <u>ESET Security Management Center User Guide</u>.

Solution

After a new installation of ESMC version 7.0 and later, no access rights are defined and the Administrator is the only user in the system. Follow the steps below to create a second administrator user with all access rights.

Create a universal permission set

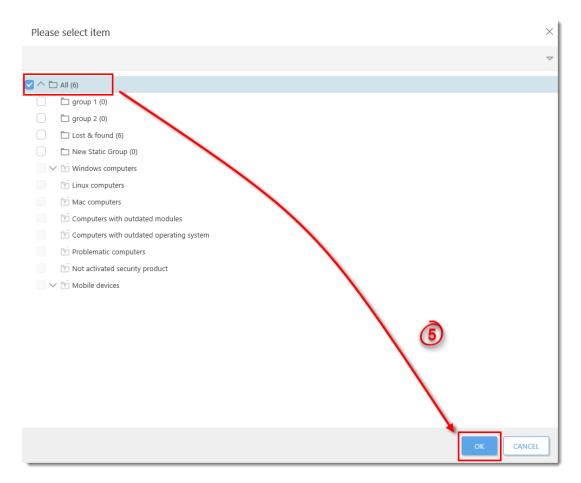

- 1. Open ESET Security Management Center Web Console (ESMC Web Console) in your web browser and log in. <u>Open ESMC Web Console</u>.
- 2. Click More \rightarrow Access Rights \rightarrow Permission Sets \rightarrow New.

Create a second administrator user

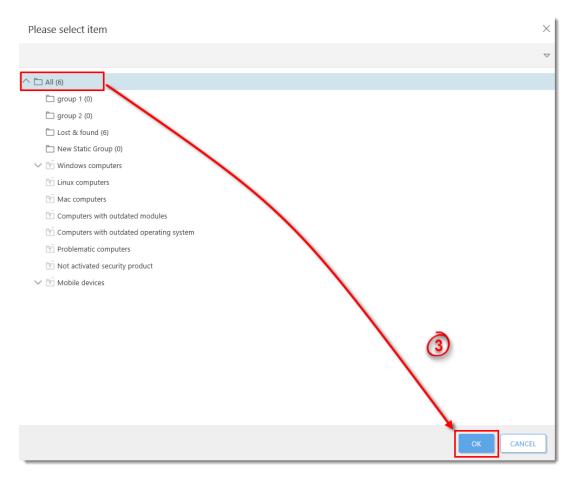

Create a secondary administrator user and keep the credentials for the master Administrator account secure so that there is always one account with full permission to manage all others. Follow the steps below to create a second administrator user with access to all groups and objects:

- ESET SECURITY MANAGEMENT CENTER C Users Please select one native user or one mapped domain security group - Basic 됴 ACCESS GROUP Select Basic ∇ A へ 名 Native Users Please select one native user or one mapped domain security group A Administrator ନ୍ୟ Mapped Domain Security Groups <empty> Users ⓓ
- 1. Navigate to **More** → **Access Rights** → **Users** and click **New**.

1. In the **Basic** section, name your new user **ESET_admin** to match the permissions set you created in part 1 and then click **Select** under **Home Group**.
