## Getting started with ESET Remote Administrator (ERA) - Azure

Ondersteuning | ESET Nederland - 2017-11-06 - Comments (0) - 6.x

<https://support.eset.com/kb6049>

### System Requirements and Installation

#### Prerequisites

A compatible VM is required to install ERA VM for Microsoft Azure. Prior to installation, review the [ESET Remote Administrator VM for Microsoft Azure—FAQ](#).

### Install ESET Remote Administrator (ERA)

[Install ESET Remote Administrator VM for Microsoft Azure](#).  
When ERA VM for Microsoft Azure is installed, continue to Step 3 below.

### Add Client Computers

[Add client computers to the ESET Remote Administrator](#).  
Once you have successfully added all client computers, continue to Step 4 below.

### Deploy the ERA Agent

**Small-to-medium businesses:** Follow our deployment instructions for client operating system(s) in your network:

[Windows](#)

[Linux](#)

[OS X](#)

**Enterprise Deployment:** Many large networks use GPO or SCCM, [see our instructions](#) to deploy ERA Agent to your network using one of these methods.

Once you have successfully deployed the ERA Agent to all endpoints, continue to Step 5 below.

## Install ESET Solutions on Client Computers

[Deploy ESET endpoint products to your client computers](#). Once you have successfully installed ESET solutions on all client computers, continue to Step 6 below.

## Post Installation Tasks

Congratulations! You are now ready to manage your network using ESET Remote Administrator (ERA) VM for Microsoft Azure. The following articles will assist you in the completion of post installation tasks:

After installing ESET solutions on clients, you can create [static](#) or [dynamic](#) groups to organize your endpoints and begin [enforcing policies](#).  
[Create, assign or schedule a new server task](#). For example, refer to the following Knowledgebase article: [Configure automated email or file reports in ESET Remote Administrator Web Console \(6.x\)](#).  
[Create or manage your notifications](#).  
[Organize your licenses](#).  
[Manage client computers using client tasks](#). For example, refer to the following Knowledgebase article: [Virus Signature Database Update](#).
