Keyboard Layouts supported by DESlock+ Pre-boot Authentication (Bootloader)

Anish | ESET Nederland - 2018-03-07 - Reacties (0) - ESET Endpoint Encryption

From version v4.8.0, DESlock+ provides extended keyboard support for pre-boot authentication. This article lists the keyboard layouts supported when entering a users Full Disk Encryption credentials.

NB: When encrypting systems with UEFI versions prior to UEFI v2.3 only US and UK keyboard maps will be available. If your system is certified for Windows 8 or Windows 10 it will be using UEFI v2.3 or newer and all keyboards will be supported. This does not affect legacy BIOS systems.
