Activate ESET business products using ESET PROTECT in offline environment

Steef | ESET Nederland - 2021-01-15 - Reacties (0) - ESET PROTECT

Issue

- Activation fails due to no internet connection
- A Security Admin needs an offline license file (.lf) to activate an ESET product
- [Create offline license files](#)
- [Add offline license file to the client task](#)

"Legacy" licenses

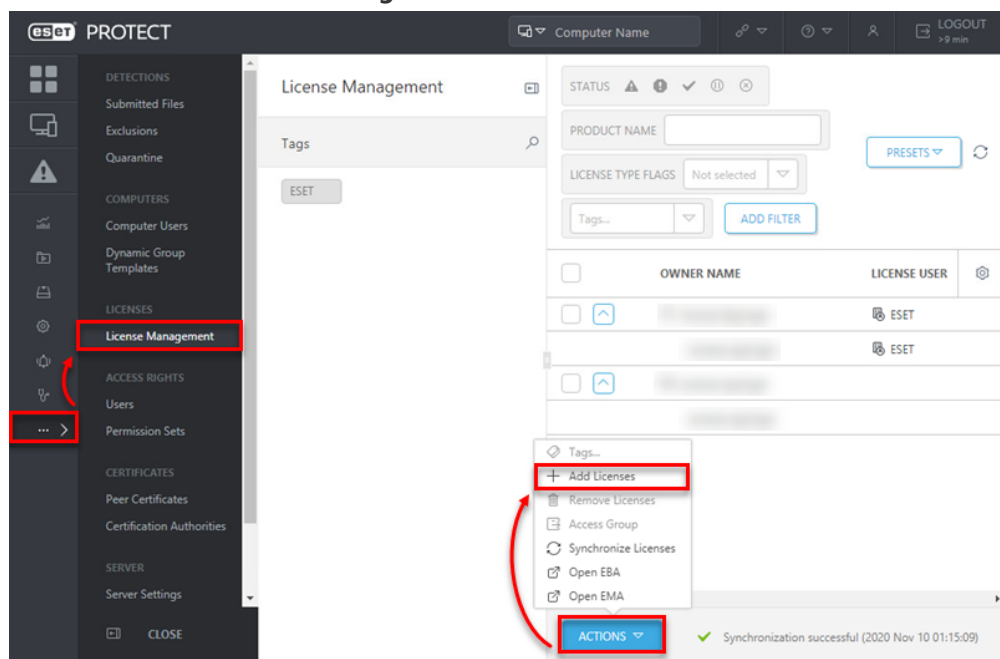

For more information about retrieving legacy license files from ESET Business Account, [see our Online Help topic](#).

Solution

Using your ESET Business Account, you can download an offline license that can be used to activate products installed on a computer without an internet connection, or that cannot be activated for other reasons.

I. Create offline license files

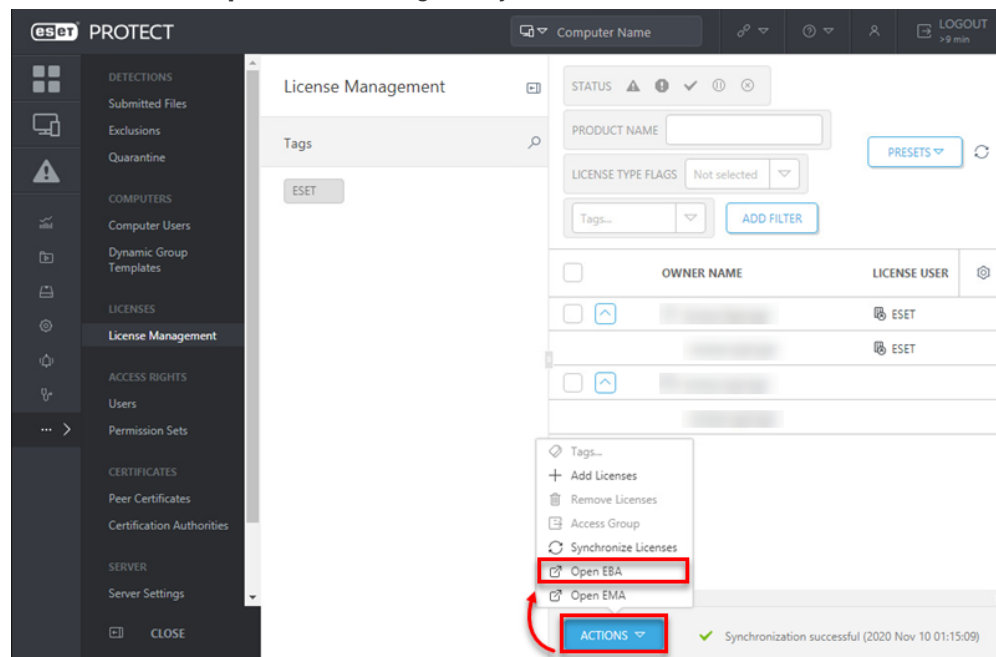

1. [Open ESET PROTECT Web Console](#) in your web browser and log in.
2. Click ... More → **License Management** → **Actions** and click **+ Add Licenses**.

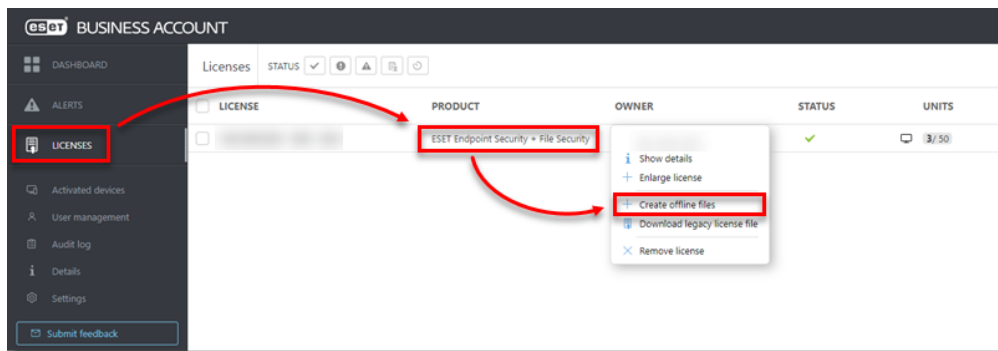

3. Select **Offline License File**, take note of the License File Token (you will need it

later) and then click **Cancel**.

4. Click **Actions** → **Open EBA** and log in to your ESET Business Account.

5. Click **Licenses**, select the license, and click **Create offline files**.

6. Select a product for this file, enter the **Name** of the file, and its **Unit count** (number of seats exported to the license file).
7. Select the check box next to **Allow management with ESET PROTECT** and enter the **ESET PROTECT token** you saved from step 2.
8. Click **Generate**.

9. Select the license and click **Show details**.

10. Click the **Offline files** tab, select the license file you just created, and then click **Download**.

▼ **Download** option is not offered?

You need to enable downloading the offline files.

1. Navigate to **Settings**.
2. Select the option **Show the download option for offline license files**.

You will see the **Selected file was downloaded** message when it is successful.

11. In the ESET PROTECT console **Add License** window, click **Choose File**, select the offline license file you just downloaded from ESET Business Account and click **Upload → Add Licenses**.

Add License

You can add your license using one of the following options:

- ☐ ESET Business Account or ESET MSP Administrator
- ☐ License Key
- ☒ Offline License File

License File Token

Offline License File

Choose File Windows Security.If

UPLOAD

ADD LICENSES CANCEL

You will see the **Licenses have been successfully added by license file** message when it is complete.

12. The licenses will be displayed by category in the **License Management** tab. There may be a delay before the list is updated.

ACTIONS Synchronization in progress.

II. Add offline license file to the client task

[Activate endpoint machines individually](#)

[Activate endpoint machines from ESET PROTECT](#) article and select the offline license file you created in [section I](#).

1. [Create a client task](#) and use the settings as described in the following steps.
2. In the **Basic** section, give your task a **Name** and optional **Description**.

The screenshot shows the 'New Client Task' configuration window in the ESET PROTECT interface. The 'Basic' tab is selected, and the 'Name' and 'Description' fields are highlighted with a red rectangle. The 'Name' field contains 'Install EES' and the 'Description' field contains 'Installation of EES offline license'. Below these fields, the 'Task Category' is set to 'All Tasks' and the 'Task' is set to 'Software Install'. The window includes a sidebar with navigation icons and a top bar with user information and a logout button.

Field	Value
Name	Install EES
Description	Installation of EES offline license
Task Category	All Tasks
Task	Software Install

3. In the **Settings** section, select the offline license file you created in section I, select **Install by direct package URL**, enter the URL where the file is hosted on your network share and then select **I accept the terms of application End User License Agreement**.
4. Select **Automatically reboot when needed** and click **Continue**.

The screenshot displays the 'New Client Task' configuration interface in ESET PROTECT. The 'Settings' tab is selected in the left sidebar. The main panel shows 'Software installation settings' with the following components:

- ESET license:** A field containing 'ESET Endpoint Security for Windows, public ID' and an expiration date of '2021 Feb 4 04:00:00'.
- Package to install:** Two radio buttons are present: 'Install package from repository' (unselected) and 'Install by direct package URL' (selected). Below the selected option is a text input field for the package URL.
- Installation parameters:** A text input field.
- Automatically reboot when needed:** A checkbox that is checked.

At the bottom of the window are four buttons: 'BACK', 'CONTINUE', 'FINISH', and 'CANCEL'. The 'CONTINUE' button is highlighted with a red box. Red circles with numbers '3' and '4' are placed over the 'Settings' tab and the 'Automatically reboot when needed' checkbox, respectively, with arrows pointing to the corresponding elements.

5. [Continue creating the client task](#) and adding the trigger.
