Client workstations do not appear in ESET Security Management Center Web Console (7.x)

Anish | ESET Nederland - 2018-09-14 - [Reacties \(0\)](#) - [ESET Security Management Center](#)

Issue

- Client computers are missing from the ESET Security Management Center Web Console (ESMC Web Console) dashboard

Solution

Prerequisites

- ESET Management Agent must be installed. If you have not yet installed the ESET Management Agent on your client computers, they will not be able to communicate with the ESET Security Management Center Web Console. [Click here for instructions to install ESET Management Agent.](#)
- The client computer must be connected to your domain.
- Windows Firewall must be disabled on both server and client computers for domain connections.
- You must have a valid license for the client. Review our [licensing FAQ](#) for answers to common questions about licensing in ESET Security Management Center 7.

Verify DNS is configured correctly on your network

On the client computer that does not appear in the ESMC Web Console:

1. Press the **Windows key**  + **R** to open a run dialog.
2. Type **cmd** into the open field and click **OK**.
3. In the command prompt, type **ipconfig** and press **Enter** to display the hostname of the system and its IP address. Note the name of the system and the IP address.

On the ESET Security Management Center Server:

1. Press the **Windows key**  + **R** to open a run dialog.
2. Type **cmd** into the open field and click **OK**.
3. In the command prompt, type **nslookup**.
4. Type the hostname of the missing client and press **Enter**. Verify that the IP address and hostname in the second group of lines matches the information displayed by the "ipconfig" command that was run on the missing client (see step 3 on your client computer) .

If the responses from nslookup for the hostname and IP address do not match, there is a problem with your Forward DNS and/or Reverse DNS zones. See the following [Microsoft Knowledge Base Article](#) for information about troubleshooting DNS Zones. DNS changes may take up to 12 hours to take effect on your network and be reflected in ESMC Web Console. Check to see if missing clients are found after the changes are in place.

If you are still unable to resolve your issue, please [email ESET Technical Support](#).
