ESET Tech Center

Deploy ESET Endpoint for ARM using ESET PROTECT 8.1

Anish | ESET Nederland - 2021-07-01 - Reacties (0) - Endpoint Solutions

Issue

Required user permissions

This article assumes that you have the appropriate access rights and permissions to perform the tasks below.

If you use the default Administrator user or are unable to perform the tasks below (the option is unavailable), create a second administrator user with all access rights.

- **ESET PROTECT users:** Create a second administrator user in ESET PROTECT
- **ESET Security Management Center (ESMC) users:** Create a second administrator user in ESET Security Management Center 7.x
- Deploy ESET endpoint products to Windows ARM64 systems clients remotely using the software install task

ESET endpoint products for ARM are in the public beta stage

ESET Endpoint Antivirus and ESET Management Agent natively running on Windows ARM64 systems are available for public beta testing.

Solution

Other deployment options

You can also use SCCM or GPO deployment or deploy ESET endpoint products for Windows ARM64 systems with ESET Management Agent by creating an All-in-one installation package.

1. Open the ESET PROTECT Web Console in your web browser and log in.

2. Click **Tasks → Client tasks → Operating system → Software Install → New** and click **Client Task**.

Click the image to view larger in new window

4. Click **Settings**. Select **Install by direct package URL** and into the corresponding field, type or copy/paste the package URL:
`https://download.eset.com/com/eset/apps/business/eea/windows/latest/eea_arm64.msi`.
Select the check box next to **I accept the terms of the application End User License Agreement.** Select the check box below **Automatically reboot when needed**.

13. Send an activation task to the computers on which you installed ESET endpoint products so that they can begin receiving regular updates.

14. If you are performing a new installation of ESET PROTECT, proceed to post-installation tasks.
